

Fast, Secure & Compliant Documents with ThinPrint

- **Tasks:** S&U Software provides HR service providers with software solutions enabling a transfer of all processes like hiring, candidate management and invoicing to the cloud. Fast and reliable printing is essential and difficulties can arise with slow printing. Confidential data must also be protected from unauthorized access when printing. A secure and high-performance printing system was required.
- **Solution:** Microsoft Remote Desktop Services is used for nationwide delivery of cloud services. As a service providing partner, S&U Software ensures rapid and secure printing from the cloud by using ThinPrint's solution.
- **Benefits:** ThinPrint's bandwidth limiting and print data compression features make printing faster and ensure application stability. SSL encryption ensures sensitive data remains secure with ThinPrint. S&U Software thus document their HR activities securely and in-line with compliance regulations. They also significantly reduced administrative overhead involved with installing and managing printer drivers on servers thanks to ThinPrint's Driver Free Printing technology.
- **Quote:** "For our customers, frequent and large print jobs are business critical. We are pleased that as a cloud provider we can offer fast and reliable printing thanks to ThinPrint. Additionally, the solution fully meets all of our needs when it comes to flexibility and security." *Philipp Reif, S&U Software*
